Background

Today we're going to do an RNA-seq analysis of a data set on the common glucocorticoid steroid dexamethasone (dex), and we'll use DESeq for this analysis.

Data Import

Let's read the `count` data and `metadata` about this experiment setup from the supplied CVS files:

```
counts<- read.csv("airway_scaledcounts.csv", row.names=1)
metadata<- read.csv("airway_metadata.csv")
```
